ANSWER: C

QUESTION NO: 8

Which Network Alarm statuses are used to monitor network facilities trunk services?

- A. RED & GREEN Alarms
- B. GREEN & YELLOW Alarms
- C. RED & YELLOW Alarms
- D. RED & ORANGE Alarms

ANSWER: C

QUESTION NO: 9

Which of the following describe video dynamics as processed through a videoconference system?

- A. Cameras react to light the same as ones eye and video monitors accurately render the video information so what one sees by eye is what the far-end sees.

- B.** Cameras have limits to the range of light levels which can be accommodated and tend to process the darker regions further toward black than what ones eye sees.
- C.** Codecs have the same limits as cameras and therefore will not change the perceived qualities of the video as rendered by the cameras.
- D.** Codecs have more restrictive limits than cameras, and the best way to accurately assess the video quality sent to the far-end is to view a video scene fully coded and then decoded.

ANSWER: B D
