Where does price determination occur when a purchase order is created in ERP against a central contract?

- A. In SRM
- B. In CLM
- C. In ERP
- D. In NetWeaver PI

ANSWER: A**QUESTION NO: 5**

SAP SRM provides predefined technical events for business objects. Events can be triggered by any of the following:

- A. Business changes made in the system
- B. The results of report runs
- C. Key Performance Indicators
- D. Passed deadlines

ANSWER: A B C D**Explanation:**

Event schemas are used to control the effects of the events that belong to the business objects. They can be used to define the deadline for triggering a reaction to the event. Event categories are used to define the nature of this reaction.

The system determines the recipient for event category Alert using alert category; it sends one of the following:

Note that an event always occurs at a predefined time. However, you can trigger an alert or message before or after this time by specifying a negative or positive value. If you enter no deadline, the system assumes that the value is zero and the alert is triggered at the moment of the event.

**QUESTION NO: 6**

What configuration step is specific to the application-controlled workflow?

- A. Define a process schema
- B. Perform basic workflow customizing
- C. Activate workflows per business object
- D. Define events and expressions

ANSWER: C

QUESTION NO: 7

SRM Users can use a supplier list to search for sources of supply for their purchases.

This supplier list is compiled by the purchaser for specific products or product categories and contains suppliers and back-end contracts.

In order to integrate the supplier list into the Shop & Sourcing applications, which of the following activities are relevant?

- A. Define number range for the supplier list
- B. For the Shop application, specify if the supplier list needs to be used in isolation or in addition to the original source of supply list.
- C. Use a Business Add-In to define detailed criteria.
- D. Supplier lists can be created for products, product categories or product set-types.

ANSWER: A B C

Explanation:

The number range for the supplier list has been defined.

This need to be done in Customizing for SAP Supplier Relationship Management under
SRM Server -> Cross-Application -> Basic Settings ->Number Ranges ->SRM Server

Number Ranges -> Define Number Ranges for Supplier List.

Carry out the following settings in Customizing:

Possible sources of supply in the supplier list are:

You can do the following:
