QUESTION NO: 1

Click the Exhibit button.

The screenshot shows the 'Select Aggregate' dialog box in the NetApp FlexVol creation wizard. The dialog lists available aggregates, including AGGR_1, with columns for Aggregate, Available Size, Disk Type, FabricPool, and Encrypted. The background shows the main configuration page with fields for Name, FabricPool, Aggregate, Storage Type, Size, and Space Reserve.

Aggregate	Available Size	Disk Type	FabricPool	Encrypted
AGGR_1	281.32 GB	SSD	No	No

Your manager asks you to create a new FlexVol on an aggregate called AGGR_2. When you click "Create new FlexVol", you are unable to select AGGR_2 to create the new volume.

Referring to the exhibit, which two SVM settings solve this problem? (Choose two.)

- A. Change the aggregate security style of AGGR_2 to UNIX.
- B. Use the volume move option and reallocate the SVMs root volume to AGGR_2.
- C. In the resource allocation tab, select the "Do not delegate volume creation" option.
- D. In the resource allocation tab, select the "Delegate volume creation" option and select AGGR_2.

ANSWER: B C

You have an ONTAP cluster that is running a FlexGroup that is serving SMB data out to various users. One of the users receives an error when trying to modify an existing file.

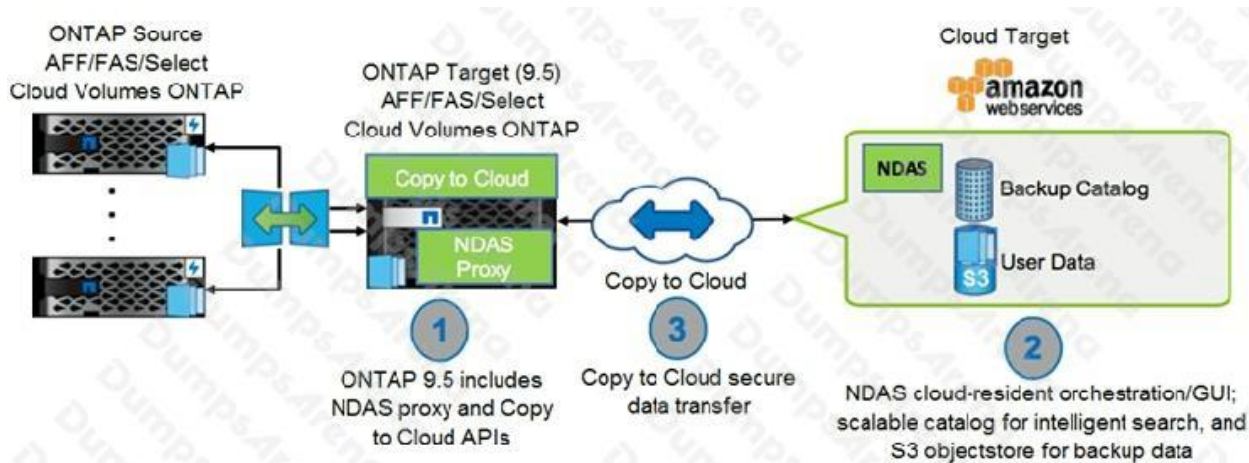

What is the cause of the problem? (Choose the best answer.)

- A. The FlexGroup is full
- B. The constituent is full
- C. The FlexGroup is offline
- D. The aggregate is full

ANSWER: B

QUESTION NO: 3

Referring to the exhibit, which LIF role is required to copy to cloud with this NetApp Data Availability Services (NDAS) solution? (Choose the best answer.)

- A. node management
- B. cluster
- C. data
- D. intercluster

ANSWER: D

QUESTION NO: 4

Click the Exhibit button.

You are configuring a NetApp cluster to communicate on VLAN 1. However, the new LIF is unable to communicate with any host in the VLAN. The network administrator has configured the switch port as an access (untagged) port on VLAN 1 and says that the VLAN is non-routed.

```
alphanal1::> vlan show -node alphanal-01 -vlan-name e0c-1
```

```
Node: alphanal-01
VLAN Name: e0c-1
Associated Network Port: e0c
Network Switch VLAN Identifier: 1
MAC address: 02:a0:98:76:e5:da
```

```
alphanal1::> net int show -vserver lab-fs1
(network interface show)
```

Vserver	Logical Interface	Status Admin/Oper	Network Address/Mask	Current Node	Current Port	Is Home
lab-fs1	lab-fs1_lif1	up/up	10.1.100.199/24	alphanal-01	e0c-1	true

```
alphanal1::> net route show -vserver lab-fs1
(network route show)
There are no entries matching your query.
```

```
alphanal1::> network ping -vserver lab-fs1 -lif lab-fs1_lif1 -destination 10.1.100.1
no answer from 10.1.100.1
```

```
alphanal1::> network ping -vserver lab-fs1 -lif lab-fs1_lif1 -destination 10.1.100.2
no answer from 10.1.100.2
```

Referring to the exhibit, what would you do to troubleshoot this problem? (Choose the best answer.)

- A. Verify that there is not IP address conflict on the network.
- B. Reconfigure the LIF to be on port e0c.
- C. Add a default gateway.
- D. Verify that the network cabling is working properly.

A customer has an issue with performance on an NVMe solution. The SVM is using all four ports shown in the exhibit.

In this scenario, how would the customer improve the host performance? (Choose the best answer.)

- A. Change the SFP+ in the controllers from 32 Gbps to 64 Gbps.
- B. Move all of the network interfaces to port 2a.
- C. Move some of the network interfaces from 2a to 2c and 2d.
- D. Remove support of the FC protocol and only use NVMe.

ANSWER: C

QUESTION NO: 6

Your customer has an NTFS volume that they want to access over both SMB and NFS. The client explains

that SMB access works fine, but the clients are unable to NFS mount the volume. What are three reasons that would cause this issue? (Choose three.)

- A. There is no export-policy rule for the NFS clients.
- B. The NSF server is not configured.
- C. Multi-protocol is not licensed on the cluster.
- D. The volume security style must be changed to UNIX.
- E. The LIF data protocol does not allow NFS.

ANSWER: A B E

QUESTION NO: 7

You are asked to create a new SVM to serve SMB data using Active Directory authentication.

Which two requirements must be satisfied prior to serving data? (Choose two.)

- A.** DNS must be enabled and configured correctly.
- B.** The CIFS license must be installed on the storage system.
- C.** An intercluster LIF must be created for serving SMB data.
- D.** An administrative user must be created for the SMB SVM.

You configured LACP between a 2-node AFF 220 system and two Ethernet switches using multichassis Ether-channel for redundancy. You sent the network connection diagram in the exhibit to your network team to cable and configure the switch. You noticed partial connectivity on the AFF A220 for the interface groups.

Referring to the exhibit, which two statements are correct? (Choose two.)

- A. ONTAP does not have a multichassis Ether-channel feature.
- B. The network team forgot to verify the port channel members.
- C. 10 GbE ports are not supported with the AFF A220.
- D. The storage cabling to the switches is incorrect.

ANSWER: A D

QUESTION NO: 9

Your company requires that all data must be encrypted in flight to prevent data from falling into the wrong hands.

What are two ways to accomplish this task? (Choose two.)

- A. Ensure that SnapMirror compression is enabled in all SnapMirror relationships.
- B. Modify your cluster peering relationships to support cluster peering encryption.
- C. Enable Multi-Factor Authentication (MFA) for your SnapMirror relationships.
- D. Ensure that all intercluster replication traffic is done through a VPN tunnel.

The volumes shown in the exhibit, vol1 and vol2, are in the same AFF aggregate. You write the same large 100 GB file to both vol1 and vol2.

Based on the volume efficiency settings, which action occurs? (Choose the best answer.)

- A.** The files are deduplicated at the volume level.
- B.** The files are deduplicated at the SVM level by SVM1.
- C.** The files are deduplicated at the aggregate level.
- D.** The files are queues for a background deduplication schedule.
