QUESTION NO: 1

How can the Eclipse error logs in the Toolkit be viewed?

- A. Error Log view in the Toolkit
- B. Problems view in the Toolkit
- C. Select Integration flow>error log
- D. Right-click Application container in Toolkit > Error logs

ANSWER: A**QUESTION NO: 2**

A developer has multiple applications that require different versions of specific resources. How should the different versions of the common resources be stored to allow for this?

- A. Add all common resources to an subflow.
- B. Add all common resources to a static library.
- C. Add all common resources to a shared library.
- D. Add all common resources to an application project.

ANSWER: B**Explanation:**

Consider using libraries to use different versions of a coherent set of routines and definitions.

If you want each application to use a different version of the contained resource, use a static library. Each application that references that static library is deployed with its own private copy of that library. If a static library is updated, each application that references it must be repackaged and redeployed with the updated static library.

Incorrect Answers:

C: If you want to deploy and manage just one copy of those common resources, use a shared library.

QUESTION NO: 3

What are two options for creating an MQEndpoint policy? (Select 2.)

- A. Use the BAR file editor.
- B. Use Integration Bus Explorer.
- C. Use the mqsicreatepolicy command.
- D. Use the mqsattachpolicy command.
- E. Use the Integration Bus web user interface.

ANSWER: C E

Explanation:

You can use the following tools to create, attach, and manage MQEndpoint policies: ▪ Command line

To create a policy, use the mqsicreatepolicy command. For more information, see Creating and importing policies. ▪ Web user interface (UI)

- IBM Integration Toolkit
- Representational State Transfer (REST) application programming interface (API)

QUESTION NO: 4

How is a secured and trusted communication link between IBM Integration Bus (IIB) and Business Process Manager (BPM) built.

- A. Enable WS-Security on both BPM and IIB.
- B. Programmatically encrypt the outgoing messages
- C. Add a certificate to the truststore to set up the SSL communication between BPM and IIB.
- D. There is no need to build a security link because BPM and IIB should always be deployed on the same network behind the firewall.

ANSWER: C

QUESTION NO: 5

Which tool allows a configurable service to be imported and exported between systems?

- A. Broker Explorer
- B. Web User interface
- C. IBM Integration Toolkit

D. IBM Integration Explorer

ANSWER: D

Explanation:

Use the IBM Integration Explorer to export a configurable service to use on another integration node (broker).

QUESTION NO: 6

Which of the following are available in IBM Integration Bus for administration? (Choose two.)

- A. IBM Integration API
- B. MQ Administration Client
- C. IBM Integration Bus Explorer
- D. Web Services Administration Client
- E. IBM Integration Web User Interface

ANSWER: A E

QUESTION NO: 7

Application data that comes from a C or COBOL application, or consists of fixed-format binary data should belong to which message domain?

- A. MIME domain
- B. DFDL domain
- C. SOAP domain
- D. DataObject domain

ANSWER: B
