QUESTION NO: 9

Match the ClusterXL modes with their configurations.

Exhibit:

Mode	Configuration
A. Legacy mode High Availability	1. Every member of the cluster receives all packets sent to the cluster IP address, with the load distributed among all cluster members.
B. New mode High Availability	2. All machines may be active, based on a peak load algorithm. A failure of the active machine causes a failover to a cluster member bearing a lesser load.
C. Load Sharing Multicast mode	3. Provides a clustering mechanism through the use of cloned interface configuration details.
D. Load Sharing Unicast mode	4. One machine in the cluster receives all traffic from a router, and redistributes the packets to other machines in the cluster, implementing both Load Sharing and redundancy.
	5. Only one machine is active at any one time. A failure of the active machine causes a failover to the next highest priority machine in the cluster.

A. A-2, B-3, C-4, D-1

**B.** A-2, B-3, C-1, D-5
