Topic Break Down

Topic	No. of Questions
Topic 1, Describe how to configure various settings and host properties	8
Topic 2, Describe how to configure media, volume pools and volume groups	4
Topic 3, Describe how to configure tape and disk storage	7
Topic 4, Describe how to configure and utilize policy attributes	6
Topic 5, Describe how to configure and utilize policy scheduling	2
Topic 6, Describe how to configure policy clients and backup selections	3
Topic 7, Explain how to implement specialized backup solutions	10
Topic 8, Describe the function, uses, and administration of deduplication	10
Topic 9, Describe how to perform catalog backup configuration tasks	3
Topic 10, Describe configuring Appliances through CLISH and App Web UI	4
Topic 11, Describe how to obtain and install NetBackup release updates	4
Topic 12, Describe media and image retention concepts	7
Topic 13, Describe how to manage disk storage, tape devices and tape media	12
Topic 14, Describe how and when to run backup and deduplication jobs	4
Topic 15, Describe how to initiate, prioritize, and monitor restore jobs	3
Topic 16, Describe how to interact with NetBackup on Appliances	4
Topic 17, , Describe how to manage storage using CLISH and Appliance Web UI	2
Topic 18, Describe how to obtain and install NetBackup Appliance updates	2
Topic 19, Monitor NetBackup Appliance hardware	3
Topic 20, Topic 21, Analyze, optimize, and tune NetBackup	5
Topic 21, Topic 22, Analyze, optimize, and tune NetBackup Appliances	2
Topic 22, Topic 23, Interpret status codes and job details	6
Topic 23, Topic 24, Troubleshoot devices and media	7
Topic 24, Topic 25, Troubleshoot common issues related to disaster recovery	5
Total	123

QUESTION NO: 1

An administrator has backups failing with status code 96 due to tapes being prevented from returning to the scratch volume pool after the images they contain expire.

What prevented the media from returning to the scratch pool?

A. media was created in volume pools other than the scratch pool

B. media was in an off-site location

C. media was written with multiplexed images

D. an application other than NetBackup wrote to the media

ANSWER: A

QUESTION NO: 2

Which two conditions must be met to change the volume group of a tape? (Select two.)

A. backup tapes must be in the same library or standalone

B. backup tapes must have barcode labels

C. backup tapes must be unassigned

D. backup tapes must be vaulted

E. backup tapes must have the same media type

ANSWER: A E

QUESTION NO: 3

A NetBackup Master Server has many backups running each night to an MSDP pool that take a long time to complete. While these backups are running, replication jobs are queued.

Which action should the administrator perform to ensure replications can occur without waiting for the backups to complete?

A. increase the replication job priority

B. create a new disk storage unit to be used for replications

C. increase the maximum concurrent jobs for the disk storage unit

D. increase the maximum I/O streams for the disk pool

ANSWER: D

QUESTION NO: 4

Which two protocols can be used to automate NetBackup Release Update installation on clients through LiveUpdate? (Select two.)

A. FTP

B. HTTP

C. SFTP

D. HTTPS

E. SSH

ANSWER: B D

QUESTION NO: 5

Which option is available with a Trusted Master Server?

A. Backup of other Master Server domains

B. Duplications

C. Automatic Image Replication

D. Catalog backups

ANSWER: C

QUESTION NO: 6

Which two appliance performance scenarios benefit from seeding the MSDP pool? (Select two.)

A. new client backups over WAN

B. new application backups over SAN

C. new VADP VMWare backups using Media Server as the backup host

D. new replication to a new DR site

E. new clients with large file systems containing small files

ANSWER: A D

QUESTION NO: 7

In a NetBackup environment with only appliances, there is a mixture of 1GbE and 10GbE networks as well as Fibre channel SAN.

Which two performance tuning scenarios result in optimized backup throughput? (Select two.)

A. create a single bonded interface using all available interfaces, disable client-side deduplication throughout the environment, and enable network resiliency to improve network throughput

B. create separate bonded interfaces from the available 1GbE and 10GbE interfaces and configure the Fibre Transport Media Server option to back up busy application servers

C. create separate bonded interfaces from the available 1GbE and 10GbE interfaces, leverage network resiliency, and enable WAN optimization to improve network throughput

D. create separate bonded interfaces from the available 1GbE and 10GbE interfaces and leverage client-side deduplication for all suitable LAN based clients

E. create a single bonded interfaces from all the available interfaces and leverage client-side deduplication for all suitable LAN based clients

ANSWER: B D

QUESTION NO: 8

An administrator has a backup policy with the following attributes:

5 paths listed in the Backup Selections list

3 clients listed in the Clients list

Allow multiple data streams is selected

Max Jobs per Client value set to 4

How many jobs go Active when the job is started, excluding parent jobs?

A. 8

B. 9

C. 12

D. 15

ANSWER: C

QUESTION NO: 9

Backup jobs to an MSDP storage unit of a large EXT3 file system for a Linux client connected via a 1 GbE network are taking excessive time.

Which two settings should an administrator change to improve the performance of the backups? (Select two.)

A. enable client-side deduplication

B. enable multiplexing

C. enable Use Change Journal for the client

D. enable Use Accelerator for the policy

E. enable WAN optimization

ANSWER: A D

QUESTION NO: 10

An administrator wants to receive emails regarding appliance configuration changes.

Which setting should the administrator configure to ensure email notifications from the appliances are received properly?

A. Settings > Alerts > CallHome

B. Settings > Alerts > Email

C. Support > Email

D. Support > CallHome

ANSWER: B
